The new and improved Knox CompStock™, developed and patented by Knox Industries, LLC has been received with enthusiasm by sportsmen, competitive shooters and law enforcement due to its ability to dramatically reduce recoil.

Even the heaviest slug or buckshot rounds are easily controlled by medium and small sized shooters. A long day of trap or skeet shooting becomes even more pleasurable as the fatigue and discomfort caused by recoil is removed. Light loads can become fatiguing and painful, but not with the Knox CompStock with Soft-Start Cam and Hard Sleeve.

The improved patented recoil reducing system actually slows the entire recoil cycle down and absorbs more than 54% of the net peak recoil (see graph at bottom of page -- NOTE: The Soft-Start Cam increases the effectiveness of the CompStock device). Using a unique cam, roller and extension spring, the painful part of shooting is removed, leaving the fun of shooting intact. Law enforcement officers, required to qualify with a shotgun, will find the

CompStock the secret to higher scores and better field results.

Hunters and competitive shooters will find their scores and hit ratios improving as flinching and recoil anticipation decrease.

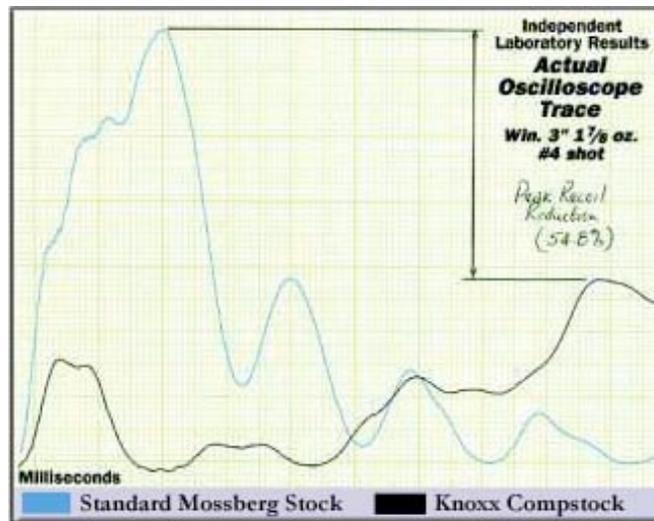

The synthetic stock features a rubber overmolded grip area with Cobblestone finish for solid, non-slip control in all weather conditions. The stock is high strength synthetic material providing years of heavy duty service. The Hard Sleeve is made from the same extra-strength plastic and protects the shooter from the action of the recoil device during recoil.

Currently available for Remington 870 series, Mossberg 500, 590, 835 & Maverick 88 series, and Winchester 1300 series pump shotguns, Knox supplies the CompStock with our Hard Sleeve rather than the rubber boot. We offer the Hard Sleeve to accommodate demands from law enforcement and sportsmen for a more durable and sturdy replacement for the rubber boot.

The CompStock with Hard Sleeve and Soft-Start Cam is the ideal choice for those seeking a recoil reducing stock in the

traditional design, rather than a folding stock. Available with a rubber overmolded forend, the CompStock is the perfect solution to the problem of recoil.

Suggested retail is \$119.95 and all models are currently available. Orders are currently being accepted. Call toll-free to **877-GO-KNOXX** (877-465-6699).

The Knox Sidewinder 10-round Drum Magazine Conversion kit is a perfect addition to the CompStock. Knox Industries recommends the MissionReady™ Sling for use with the CompStock and all Knox firearms-related products.
