

# 300 Blackout Signature Series Upper

Virtually from its inception, the PNW Arms Weapons Science® Team has been at the forefront of research and development for the .300 Blackout round. Today, PNW is proud to introduce their rugged, reliable and accurate Signature Series Upper that enables shooters to convert their existing 5.56 AR platform to the popular .300 Blackout. The PNW Signature Series Upper replaces your existing upper with no modifications and uses your existing AR lower and magazines. Built to exacting standards, the Signature Series Upper offers the improved ballistics of the .300 Blackout without the cost of a new rifle. The .300 Blackout round has 89% more frontal mass than the 5.56X45mm with sub MOA accuracy to 400 meters, and with the wide variety of ammunition, is the most versatile cartridge on the market today.

- Forged 7075-T6 M4 Flattop Upper with Internal Dry Lube and Laser T Marks
- 4150 CMV 16" 1:7 5R Rifling (5/8x24 TPI) .300 Blackout Barrel

## 16" Chrome Moly Barrel

The foundation for precision with any rifle begins with the barrel. Our 16" 4150 Chrome Moly Barrel is MIL-SPEC phosphate coated, has a 1:7 twist, 5/8x24 TPI, and will provide the level of perfection necessary to produce consistent sub-MOA groups whether you're on the range or in the boonies.

## 15" MWI Modular Free Float Rail

Incredibly light and rugged, the Midwest Industries 15" handguard provides a rock solid lock up and a ton of functionality to our upper. Its modular design includes a monolithic continuous top rail with MIL-STD 1913 Rails (T-Marked for accessory location) and three rail sections as well as five anti-rotation QD socket locations for sling swivels. Type 3 hard coat anodized for a lifetime of service.

## V.2 Gunslinger Charging Handle

The V.2 Gunslinger Charging Handle has a hard coat anodized finish and an enlarged release catch for immediate action. It is manufactured from a solid piece of 100% 6061-T6 billet aluminum, allowing it to be held to extremely consistent tolerances and maintain an exceptional level of strength.

## About the .300 Blackout Caliber

The 300 Blackout 7.62x35mm is a rifle cartridge developed in the United States and originally chambered in the M4 rifle. SAAMI approved the round specifications on January 17, 2011. It works with any standard AR-style platform bolt groups, lowers and magazines at standard pressures. PNW Arms produces the 300 BLK caliber in four ammunition types: Range, Subsonic, Match, and Hunting. PNW's versatile line of .300 Blackout cartridges offers a viable replacement to the 9mm SMG, the 5.56mm carbine, and intermediate range .308 platforms in one rifle. Threats from CQB to extended ranges can be quickly addressed by changing magazines, not weapons.

*Designed, Engineered and Manufactured with Pride in America*
